FOR IMMEDIATE RELEASE

Comira Partners with BadgeCert to Offer Digital Badge Services

San Mateo, CA – March 1, 2016– Computer Assisted Testing Service, Inc. dba Comira, one of the most trusted and experienced independent computer-based testing providers in the industry, is pleased to announce its partnership with BadgeCert Inc., a leader in digital credentialing and professional recognition, for the delivery, management, and verification of digital badges. The partnership allows earners to immediately display a secure and verifiable digital badge across professional and social platforms while giving issuing organizations market and brand exposure in social networks.

“We are delighted to offer digital badge services through our newly established partnership with BadgeCert,” says Alina Cooper, Director of Business Development at Comira. “Digital badges have gained notable traction in the credentialing industry and we have found that BadgeCert’s verification capabilities will enhance and preserve the integrity of our customer’s credentials.”

“We are thrilled to partner with Comira as they have consistently exceeded their clients’ expectations with respect to high quality customer service and technology innovation,” says Ginger Malin, Ph.D., Founder and EVP of Business Development at BadgeCert. “This partnership will provide organizations with a seamless administrative experience, while also delivering significant value to certificants as they can now digitally share their verified credentials across the web.”

In today’s digital world, professionals want the option to share their credentials online. Digital badges are used in professional and social networking environments to recognize achievements and establish credibility in real time.

BadgeCert digital badges are third-party verifiable icons that are packed with information or “metadata” about the issuing organization, as well as when and how the credential was earned and when it will expire. They can represent accomplishments such as knowledge competency, attendance, participation, or the completion of a professional credential.

An organization will work directly with Comira to create a unique digital badge for each of its credentials. As credentials are earned, Comira works through BadgeCert’s technology to award the verified credential so that an earner may begin securely sharing the badge in social networks and with individuals to gain recognition for the accomplishment.

Comira will begin offering digital badge services immediately.

[About Comira](#)

Comira is a full service testing company for licensure, certification, assessment, and educational testing programs. Comira offers end-to-end examination services, including fixed and remote computer-based testing, test development and research, and construction of new test item types for a wide range of professions. The breadth of our experience working with regulatory agencies at the Federal, state, and national levels provides us with a full understanding of the rigorous requirements and challenges found in examination-based licensure and certification. About BadgeCert

BadgeCert's enterprise-class hosted software platform enables organizations to recognize their stakeholders' accomplishments with dynamic digital badges. BadgeCert's 100% verifiable badges are embedded with qualifying information that details the nature of an earner's accomplishment and once received, earners can share them with others (particularly employers, customers or colleagues) by putting them directly on their social media profiles, corporate databases, resumes or email signatures.
